Upon breaking the circuit, the greater part of the current is cut off at once; but a bright spark does not appear, because the self-induced current forces its way through the spark-destroyer instead of across the airgap made between B and M; that is, it uses T and M as a part of its circuit. The tendency to form a spark between T and M, as T is raised still farther, is slight because the core has already lost most of its magnetism. (F) For the spark-destroyer use a bottle of salt and water or an old worn-out dry cell, CHAPTER IX CORES, YOKES AND ARMATURES 175. Cores for Electromagnets. The iron upon which the wire of an electromagnet is wound is called its core. Soft iron bolts and rivets of various kinds make very good cores, as well as the pieces especially made for...
